

HIMANSHU

Bengaluru, India | +91 8094135928 | himanshukgp1@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Indian Institute of Technology, Kharagpur
5yr-Integrated MSc, Mathematics and Computing
• **GPA:** 8.25/10

Jul 2016 - Apr 2021

PROFILE

Backend engineer with experience building high-volume payment systems (150K txns/day, 14 bank integrations, recon under 10 min) at PayGlocal and company-wide supply planning infrastructure at Flipkart. Specializes in event-driven microservices, serverless orchestration on AWS, and financial reconciliation platforms. Published researcher (IEEE/Springer), IIT Kharagpur.

SKILLS AND EXPERTISE

- **EXPERTISE:** Backend Development, Java API development, Event-Driven Architecture, AWS Serverless, Microservice Architecture, Financial Systems
- **TECHNICAL SKILLS:** Java, Spring Boot, Dropwizard, Python, AWS (Lambda, Step Functions, DynamoDB, S3, Batch), Kafka, Spark, Hive

WORK EXPERIENCE

Payglocal Technologies Pvt Ltd

Senior Software Engineer

Oct 2025 - Present

Bengaluru

- Architected escrow mirroring system processing ~150K daily transactions across 14 bank integrations into internal ledgers with near-real-time sync, enabling auditability and downstream reconciliation for card payment orchestration
- Built multi-tenant settlement and reconciliation platform matching internal payment events with bank statements; reduced reconciliation from hours of manual effort to under 10 minutes via idempotent ingestion and discrepancy detection
- Developed chargeback pipeline handling ~1,000 concurrent dispute cases with automated lifecycle tracking, cross-system mapping (RRN/UTR), and merchant-facing status updates - cutting dispute resolution turnaround and enabling timely settlement
- Designed deterministic key schema in DynamoDB (composite keys, GSIs, monotonic sequencing) ensuring deduplication, replay safety, and ordering guarantees across high-frequency financial ingestion

Clamator Technologies Pvt Ltd

Founding Engineer

Feb 2024 - Oct 2025

Bengaluru

- Sole engineer behind ZaubX, an AI-powered EdTech platform (App Runner, Vercel, Firebase) architected for 100K+ concurrent capacity; built human-in-the-loop content ingestion pipeline with multi-reviewer validation and LLM-based enrichment
- Deployed a WhatsApp bot handling ~24K messages/day from ~1,200 DAU for university attendance and academic workflows, built solo on Spring Boot (Heroku) at under ₹700/month infra cost
- Architected structured knowledge graph (Cases → Slides → Notes → Questions) with deterministic retrieval APIs and session-persistent mentor chat, separating structured content delivery from AI-driven retrieval for forward-compatible architecture

Flipkart Internet Pvt Ltd

Software Development Engineer

Jun 2021 - Oct 2022

Bengaluru, India

- Designed REST APIs orchestrating ETL pipelines processing TBs/day across Spark/Hive; outputs consumed company-wide by business planning, warehouse managers, and delivery hubs
- Owned Flipkart's end-to-end supply planning backend (Dropwizard, MySQL, Azkaban, Spark/Hive), replacing manual Excel-based planning across all categories with automated, UI-driven demand-supply workflows
- Built Kafka event pipeline (1 producer, 4 consumers) with idempotent handling and offset-commit-after-processing for effectively exactly-once semantics; resolved production concurrency bug where duplicate callbacks spawned parallel job execution

PUBLICATION

- Sreeja. S. R, Himanshu, Debasis Samanta. Weighted sparse representation for classification of motor imagery EEG signals. *in 41st Engineering in Medicine and Biology (EMB) Conference, Berlin, IEEE, July 2019*
- Sreeja S.R., Himanshu, Samanta, D. Distance-based weighted sparse representation to classify motor imagery EEG signals for BCI applications. *Multimed Tools Appl 79, 1377513793 (2020). May 2020*

OTHER ACHIEVEMENTS

- **G-Attach – Email Attachment Organizer Web App:** Built G-Attach during Microsoft Code.fun.do - web app for extracting and categorizing email attachments
- **open source contributions:** Contributed features and unit tests to SunPy, an open-source Python library; collaborated via code reviews and PRs with the global maintainer community
- **MSc Thesis:** Dissimilarity-Weighted Sparse Representation framework for EEG signal classification (Python, published IEEE/Springer)
